

**MP 27.3 8' Concrete Slab**

**Mile 26.2 Trail MP 25.2 Over McPherson Creek, East of National Tunnel**

No construction dates evident – but probably built 1913 during Montour expansion.

Bridge over small stream is not really noticeable from the Right-of-Way. It is in the center of this picture, which is looking west toward National Tunnel.

Bryan Seip photos

This view is of south side of bridge.

North side of bridge.

Topo map shows bridge just above center, about half-way along straight tangent. McPherson Creek is in blue, crossing under railroad. National Tunnel is at upper left, with Cecil-Hendersonville Road at right in dashed red.
