

MP 27.5 8' Concrete Slab

Mile 26.4 Trail MP 25.4 Over McPherson Creek, East of National Tunnel

No construction dates evident – but probably built 1913 during Montour expansion.

Bridge over small stream is not really noticeable from Right-of-Way, except for split rail fence on either side. This view is of south side of bridge.

Bryan Seip photos

Looking west along the Right-of-Way. The bridge is just before the end of the curve, noted by the split rail fence.

Topo map shows bridge at right center, at west end of curve. McPherson Creek is in blue, crossing under railroad twice. National Tunnel is at upper left, with Cecil-Hendersonville Road at right in dashed red.
